Screen**Beam**

Model# SBWD100A

ScreenBeam Display Adapter
SBWD100A

Enjoy all of your Favorite Content on the big screen

Tired of squinting to watch movies on your laptop while your HDTV sits idly by? Want to show your vacation photos, Hulu video, or presentation on a large display? With Actiontec's ScreenBeam you can mirror whatever is on your smartphone, tablet or PC display onto your HDTV.* Surf the Web or watch movies from Netflix, Hulu, Amazon, or YouTube – all from the comfort of your living room couch.

Works with Windows 7/8 computer

Forget about having to purchase a bunch of different USB wireless adapters for each device. ScreenBeam is the industry's first truly universal solution, and can stream content from Windows 7 or Windows 8 machines, as well as Miracast-enabled smartphones and tablets. As a result, there's no need to worry about compatibility and interoperability issues: if you buy a new laptop with a different processor or upgrade from Windows 7 to Windows 8, ScreenBeam has you covered.

Brilliant audio and visual experience

With this state of the art wireless kit, you can shed the wires without compromising your HD experience. ScreenBeam supports up to 1080p full HD video and audio. This means you'll enjoy a pristine picture and sound, just like with a high-priced HDMI cable.

ScreenBeam Transmitter

Easily display presentations or your entire laptop screen in the conference room or office

Need an impromptu meeting in the office? Have a big presentation in the conference room? With ScreenBeam, you can push your entire laptop screen or just a portion to a large HDTV. And in the conference room, you can easily share your laptop screen with the projector for hassle-free presentations.

Better quality with ScreenBeam specific wireless network

ScreenBeam creates a dedicated wireless display connection to your HDTV that does not require an existing wireless network or line of site. This means you can stream HD content all you want with ScreenBeam without any impact on the Wi-Fi network you use for social networking, voice, data, and more. Likewise, your ScreenBeam video won't be subject to any hiccups, congestion, or slow-downs in your Wi-Fi network.

Unlike Other Solutions, ScreenBeam...

1. Can be used with Windows 7 or 8 laptop/desktop.
2. Works with Intel® systems with lastest WiDi software and drivers update.
3. Works with any Miracast-enabled smartphone, tablet, or laptop/desktop.
4. Is HDMI-certified for high quality connection to your HDTVs and projectors.

* Compatible with any laptop, tablet, or smartphone that supports the Miracast standard, including Windows 7 and Windows 8 devices

Actiontec®
